

tesa[®] health markets converting services

Made-to-measure solutions for the health markets industry

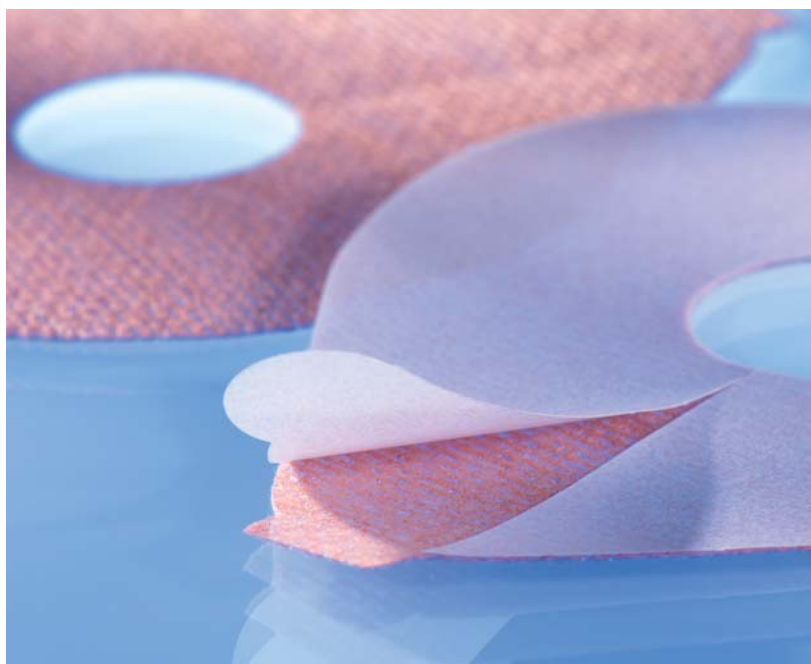

Constantly in focus: quality, precision and user friendliness

tesa offers a wide range of products for applications in the health markets as well as a special range of adhesive tapes specifically for the in vitro diagnostics industry. Our flexible and highly precise production facilities enable the manufacture of adhesive tapes under ISO 13485 and clean room conditions and underline our position as a competent partner for the industry.

As the in-house specialist for die-cutting, laminating, printing, assembly and packaging of materials for the health industries, tesa Converting Center GmbH utilises a combination of modern technology and employee know-how to deliver the highest levels of efficiency, precision and quality – decisive in helping you gain the competitive edge.

Selected applications

On skin

- Contract manufacturing
- Wound dressings
- Wound closure strips
- Ostomy components
- Tracheostoma basis plates

In-vitro Diagnostics

- Contract manufacturing
- Microtiter sealing films
- Lateral flow backings
- Test strip components
- Laboratory labelling

Converting services available from tesa

tesa supports you along the entire design process – and can provide assistance on a range of topics such as material selection and product design, design of production processes, provision of documentation in accordance with applicable legislation, or the selection of partners for contract sterilisation work. When involved in the development process, tesa goes beyond the analysis of the technical and economic aspects of your product offering, also examining ways to optimise user friendliness levels.

Material know-how

As a subsidiary of tesa SE, tesa Converting Center GmbH has access to a broad assortment of primary materials and extensive development resources from one of the world leaders for adhesive technologies. tesa Converting Center GmbH is specialised in the processing of:

- self-adhesive materials
- dermatological materials
- foams

- nonwoven fabrics
- plastic films
- metal foils
- fabric tapes
- film and paper liners
- packaging materials

Die-cutting technology

tesa has a broad range of highly precise die-cutting technologies available. High-speed rotary die-cutting machines with inline control systems enable efficient production of large unit quantities, regardless of end-product complexity. Thick materials such as foams as well as wide materials can also be processed on-site in Hamburg.

Prototype development

Precision die-cuts from tesa are first designed in CAD systems before being implemented using plotters. This enables fast, efficient prototyping and helps you to reduce development times.

Production and packaging under cleanroom conditions

Products that are subject to higher cleanliness requirements can be produced in an ISO Class 7 cleanroom area. Specially trained employees and comprehensive monitoring and control systems ensure the highest level of cleanliness and product performance.

Traceability and lot labelling

Traceability and lot labelling are critically important in manufacturing of medical products. tesa guarantees a secure production chain through a number of measures including material certificates, batch traceability and computer-based lot identification.

Learn more about tesa

Your local tesa representative will be happy to help you with any questions you may have on the range of services and products offered by tesa. For more information you can also visit our website: www.tesa.com/industry/health_markets

tesa converting center GmbH – total quality philosophy

- Our Quality Management System is certified according to DIN EN ISO 13485:2003
